Hradená liečba sa môže indikovať v indikáciách schválených pri registrácii.

Pred začatím hradenej liečby, po troch mesiacoch a následne v polročných intervaloch sa monitoruje aktivita enzýmov alanínaminotransferázy (ALT) a kreatínkinázy (CK) s cieľom eliminovať možné významné nežiaduce účinky. Liečba je kontraindikovaná, ak aktivita enzýmu

- a) ALT pred začiatkom alebo počas liečby presahuje trojnásobok hornej hranice normy,
- b) CK presahuje päťnásobok hornej hranice normy alebo sa v priebehu liečby objaví myalgia alebo myopatia.

Efekt liečby na lipidové spektrum sa zhodnotí po troch mesiacoch od začiatku liečby.

Podmienkou hradenej liečby je abstinencia alkoholu, fajčenia a nedostatočný efekt minimálne

Hradená liečba sa môže indikovať pri postmenopauzálnnej osteoporóze u žien s ťažkou osteoporózou (pri denzitometricky zistenom T-skóre menšom ako -2,9 v oblasti krčka femuru alebo oblasť total hip)

- a) s mnohopočetnými zlomeninami stavcov (dva a viac fraktúr), kde je zlomenina stavca definovaná ako zníženie prednej výšky tela stavca viac ako 20% v porovnaní s normálnou výškou tela stavca,
- b) u ktorých zlyhala predchádzajúca antiresorbčná liečba ak po
  1. minimálne dvojročnej antiresorbčnej liečbe utrpela osteoporotickú fraktúru,
  2. dvoch rokoch antiresorbčnej liečby došlo k masívnemu poklesu kostnej denzity na krčku femuru ( $\geq 6\%$ ).

Hradená liečba sa môže indikovať a liek predpisovať len vo vybraných osteocentrách vo Fakultnej nemocnici s poliklinikou Bratislava Nemocnica Ružinov, v Národnom ústave reumatických chorôb Piešťany, v Národnom endokrinologickom a diabetologickom ústave n. o. Ľubochňa, v Nemocnici Košice-Šaca a. s., vo Fakultnej nemocnici s poliklinikou F.D.Roosevelta Banská Bystrica.

- a) hyperkalcemických krízach a stavoch,
- b) Pagetovej chorobe kostí, Sudeckovej atrofii kostí,

- d) závažnej osteoporóze potvrdennej denzitometricky (T-skóre menej ako -2,5 SD) z akejkoľvek príčiny, ak sú kontraindikované bifosfonáty, raloxifén,
- e) patologických zlomeninách stavcov z osteoporózy.

Hradená liečba je dlhodobá, za podmienky priebežných denzitometrických kontrol pri použití centrálnej denzitometrie DEXA v odstupe 12 až 24 mesiacov. Ak sa pri kontrolnom denzitometrickom vyšetrení zistí pokles kostnej denzity o viac ako je najmenšia významná zmena stanovená na denzitometrickom pracovisku, ďalšia liečba nie je hradenou liečbou.
